## Contents

### **1 Stigmergic Optimization: Inspiration, Technologies and Perspectives**

<i>Crina Grosan, Ajith Abraham</i> .....	1
1.1 Introduction .....	1
1.2 Entomology and Stigmergy .....	2
1.3 Facts About Social Insects .....	4
1.3.1 Facts about Ants .....	4
1.3.2 Facts about Bees .....	6
1.3.3 Facts about Termites .....	7
1.4 Nature Inspired Algorithms .....	8
1.4.1 Ant colonies inspired algorithms .....	8
1.4.2 Bees' behavior inspired algorithms .....	11
1.4.3 Particle swarm optimization algorithm .....	13
1.4.4 Bacteria foraging algorithm .....	14
1.5 Conclusions and Some Potential Areas for Exploration .....	16
References .....	16

### **2 Stigmergic Autonomous Navigation in Collective Robotics**

<i>Renato R. Cazangi, Fernando J. Von Zuben, Mauricio F. Figueiredo</i> .....	25
2.1 Introduction .....	25
2.2 Biological Background .....	28
2.3 Multi-robots Basis and Related Work .....	29
2.4 Evolutionary Approach for Collective Robotics .....	32
2.4.1 Robot Model .....	33
2.4.2 Multi-robot Communication based on Stigmergy .....	33
2.4.3 Artificial Pheromone Mechanism .....	34
2.4.4 Pheromone and Robot Decision Making .....	35
2.4.5 Strategies for Pheromone Deposition .....	35
Deterministic .....	36
Evolutionary .....	36
2.5 Autonomous Navigation System .....	36
2.5.1 Population of Classifiers .....	39

2.5.2	Competition Module	40
2.5.3	Evolution	41
2.5.4	Evaluation Module	42
	Collision	42
	Capture	43
	Monotony	43
2.5.5	Reproduction Module	43
	Collision and Capture	44
	Monotony	44
2.6	Experiments and Results	45
2.6.1	Sensitivity to Parameters Variation	46
	Rate of Pheromone Evaporation	46
	System Complexity	48
	Initial Position	50
	Number of Robots	50
2.6.2	Additional Experiments	53
	Experiment 1	53
	Experiment 2	54
	Experiment 3	55
2.6.3	Adaptability	56
2.6.4	Tour Optimization	57
2.7	Conclusions	60
	References	61
<b>3 A General Approach to Swarm Coordination using Circle Formation</b>		
	<i>Karthikeyan Swaminathan, Ali A. Minai</i>	65
3.1	Collective Robotics	65
3.2	Pattern Formation in Collective Robotics	66
3.3	Background	66
3.4	A Communication-Based Multi-Robot System	68
3.5	Beyond Circle Formation - Formation of Other Patterns and Groups	69
	3.5.1 Formation of a Vertical Line	71
	3.5.2 Formation of a Triangle	72
	3.5.3 Formation of a Square	73
	3.5.4 Formation of a Semi-circle	73
	3.5.5 Splitting into Four Groups	75
	3.5.6 Splitting into Groups — Generalized Case	77
3.6	Programming the Robots	78
3.7	Discussion and Conclusion	80
	References	81

#### **4 Stigmergic Navigation for Multi-Agent Teams in Complex Environments**

<i>Alfred Wurr, John Anderson</i> .....	85
4.1 Introduction .....	85
4.2 Related Literature .....	89
4.3 Stigmergic Navigation Techniques .....	92
4.3.1 Marking Bottlenecks .....	93
4.3.2 Marking Local Maxima .....	94
4.3.3 Marking Local Minima .....	95
4.3.4 Stigmergic Trail-Making .....	95
4.4 Implementation .....	99
4.5 Evaluation .....	100
4.5.1 Simple Marking Schemes .....	103
Bottleneck Markers .....	103
Local Maxima Markers .....	105
Bottleneck and Local Maxima Markers .....	105
Adding Local Minima Markers .....	106
4.5.2 Stigmergic Trail-Making .....	106
4.5.3 Improving Stigmergic Trail Making with Other Marker Types .....	108
4.5.4 Summary of Results .....	110
4.6 Discussion .....	110
4.7 Challenges and Future Work .....	112
References .....	114

#### **5 Physically Realistic Self-assembly Simulation System**

<i>Vadim Gerasimov, Ying Guo, Geoff James, and Geoff Poulton</i> .....	117
5.1 Introduction .....	118
5.2 Implementation .....	118
5.2.1 Agents .....	119
5.2.2 Rules .....	120
5.2.3 Simulation process .....	121
5.2.4 Visualization .....	123
5.2.5 User Interface .....	124
5.3 Experimental Results .....	124
5.3.1 Aggregation .....	125
5.3.2 Snake .....	125
5.3.3 Self-replicating enzymes .....	126
5.3.4 Dynamic structures .....	128
5.4 Conclusion .....	128
References .....	129

#### **6 Gliders and Riders: A Particle Swarm Selects for Coherent Space-Time Structures in Evolving Cellular Automata**

<i>JJ Ventrella</i> .....	131
6.1 Introduction .....	131

6.1.1 Particle Swarm as Catalyst for Evolution	132
6.1.2 Interactive Swarm vs. Image-Based Analysis	133
6.1.3 Motion	134
6.1.4 Purpose	135
6.2 A Description of the CA	135
6.2.1 The Transition Function	135
6.2.2 Sub-rule Redundancy and Over-Writing	137
6.3 The Particle Swarm	137
6.3.1 The Particle Cell Neighborhood	138
6.3.2 Particle Re-birth	139
6.3.3 The Genetic Operators	139
1. Selection	139
2. Reproduction	140
3. Exchanging Genes (reproduction via social communication)	140
4. Mutation	141
6.4 Experiments	141
6.4.1 The Periodic Noise Wave – Stirring the Primordial Soup	141
6.4.2 The Selection Criterion	142
6.4.3 Simulation Output	143
6.4.4 Evolving Game-of-Life at $\lambda = 0.273$	145
6.4.5 Plotting $\lambda$ with Other Values of $K$	146
6.4.6 Parameter Ranges For Optimal Swarm Performance	147
6.5 Comparison/Contrast with Other Approaches	148
6.6 Future Work	149
6.6.1 Other Selection Criteria	149
6.6.2 Particle Swarm for Categorizing Glider Interactions	150
6.6.3 Swarm For Measuring Fitness	151
6.7 Conclusions	151
6.8 Symbols Used	152
References	152

## **7 Termite: A Swarm Intelligent Routing Algorithm for Mobile Wireless Ad-Hoc Networks**

<i>Martin Roth, Stephen Wicker</i>	155
7.1 Introduction	155
7.1.1 Overview	155
7.1.2 Previous Work	156
Traditional MANET Routing	156
Ad-hoc On-demand Distance Vector Routing Protocol (AODV)	156
The Social Insect Analogy	157
How to Build a Termite Hill	158
Positive Feedback	158
Negative Feedback	158
Randomness	159
Multiple Interactions	159

Stigmergy .....	159
Swarm Intelligent MANET Routing .....	159
VWPR and Pheromone Aversion .....	160
7.1.3 Structure of Paper .....	160
7.2 Termite .....	160
7.2.1 Termite .....	161
Pheromone Table .....	161
Packet Forwarding .....	162
Packet Pheromone Accounting .....	163
Pheromone Update Methods .....	163
$\gamma$ Pheromone Filter ( $\gamma$ PF) .....	164
Normalized $\gamma$ Pheromone Filter ( $\bar{\gamma}$ PF) .....	164
Probabilistic Bellman-Ford (pBF) .....	164
Route Discovery .....	164
Route Repair .....	165
Loop Prevention .....	165
Hello Packets .....	166
Packet Structure .....	166
General Mechanisms .....	167
Piggybacked Routing Information .....	167
Promiscuous Mode .....	167
7.2.2 Simulation .....	167
Simulation Environment and Parameters .....	167
Evaluation Metrics .....	168
Data Goodput .....	168
Control Packet Overhead .....	168
Control Packet Distribution .....	168
Medium Load .....	168
Medium Efficiency .....	169
Medium Inefficiency .....	169
Link Failure Rate .....	169
End-To-End Delay .....	169
Results and Analysis .....	169
Data Goodput .....	169
Control Overhead .....	169
Control Packet Distribution .....	170
Medium Load .....	171
Medium Efficiency .....	171
Medium Inefficiency .....	173
Link Failure Rate .....	173
End-To-End Delay .....	174
Discussion .....	175
7.3 Towards An Optimal Pheromone Decay Rate Heuristic .....	175
7.3.1 The Model .....	176
7.3.2 Optimal Mean Estimation of $\Gamma(t)$ .....	177

7.3.3 Suboptimal Mean Estimation of $\Gamma(t)$ .....	177
7.3.4 The $\tau^*$ Heuristic .....	177
7.3.5 A Return to the Box Filter .....	178
7.3.6 Generalization of the Forwarding Equation .....	179
7.3.7 $\tau^*$ Simulation .....	179
7.3.8 $\tau^*$ Heuristic Analysis .....	179
7.3.9 Full Circle - A Return to Traditional Routing .....	181
7.4 Conclusion .....	182
7.4.1 Review .....	182
7.4.2 Future Work .....	182
References .....	183

## **8 Stochastic Diffusion Search: Partial Function Evaluation In Swarm Intelligence Dynamic Optimisation**

<i>Kris De Meyer, Slawomir J. Nasuto, Mark Bishop</i> .....	185
8.1 Introduction .....	185
8.2 Mechanisms of Interaction in Social Insects .....	187
8.3 The Concept of Partial Evaluation .....	188
8.4 Stochastic Diffusion Search .....	189
8.4.1 The restaurant game .....	189
Terminology .....	190
Algorithm .....	191
Initialise .....	191
Test .....	191
Diffuse .....	192
Halt .....	192
From agent operation to population behaviour .....	192
8.4.2 Previous Work on SDS .....	193
8.5 Similarities and Differences between SDS and Social Insects Algorithms ..	193
8.5.1 Comparison with social insects .....	193
8.5.2 Comparison with Ant Algorithms .....	194
8.6 Variations on a Theme .....	194
8.6.1 Manipulating the Resource Allocation Process .....	195
Shifting the balance towards local exploration .....	195
Shifting the balance towards global exploration .....	195
8.6.2 Standard SDS and stochastic objective functions .....	196
8.6.3 Standard SDS and dynamic objective functions .....	196
8.7 Examples .....	196
Characterisation of the search problem .....	199
The effect of noisy perturbations .....	201
Moving peaks .....	201
Changing peaks .....	202
8.8 Discussion .....	202
8.8.1 SDS and evolutionary algorithms .....	204
8.9 Conclusions .....	204

References .....	205
<b>9 Linear Multi-Objective Particle Swarm Optimization</b>	
<i>Sanaz Mostaghim and Werner Halter and Anja Wille</i> .....	209
9.1 Introduction .....	209
9.1.1 Linear Constrained Multi-Objective Problems .....	211
9.1.2 Boundaries of the Feasible Region .....	213
9.2 Multi-objective Particle Swarm Optimization .....	213
9.2.1 Constraint Handling .....	216
9.3 Linear Multi-Objective Particle Swarm Optimization .....	217
9.3.1 Exploring the Feasible Region .....	217
<b>Method (a):</b> .....	218
<b>Method (b):</b> .....	218
.....	218
9.3.2 Linear Particle Swarm Optimization .....	219
9.3.3 Feasibility Preserving Method .....	219
<b>Pbest method</b> .....	220
<b>Random method</b> .....	220
<b>Boundary method</b> .....	220
9.3.4 Discussion .....	220
9.3.5 Linear Constraint Handling .....	221
9.4 Experiments .....	221
9.4.1 Test functions .....	222
Parameter Setting .....	223
9.4.2 Comparisons .....	224
$\epsilon$ -Smetric .....	225
9.4.3 Evaluations .....	227
9.5 Multi-objective Optimization of Multi-component Chemical Systems ....	231
9.5.1 Background .....	231
9.5.2 Experiments .....	233
9.5.3 Evaluations .....	234
9.5.4 Uncertainty on $XSiO_2$ .....	235
9.6 Conclusion .....	236

## **12 Swarm Intelligence: Theoretical Proof That Empirical Techniques are Optimal**

<i>Dmitri Iourinski, Scott A. Starks, Vladik Kreinovich, Stephen F. Smith . . . . .</i>	281
12.1Introduction . . . . .	281
12.1.1What Is Swarm Intelligence . . . . .	281
12.1.2What Formulas Are Used in the Existing Swarm Intelligence Systems	282
12.1.3Formulation of the Problem . . . . .	283
12.2Main Idea . . . . .	283
12.3From the Main Idea to the Exact Formulas . . . . .	284
12.4First Result . . . . .	284
12.5Proof of Theorem 1 . . . . .	285
12.6From Informally “Optimal” to Formally Optimal Selections . . . . .	285
12.6.1In the Previous Section, We Used Informal “Optimality” . . . . .	285
12.6.2What is an Optimality Criterion? . . . . .	286
12.6.3Examples of Optimality Criteria . . . . .	286
12.6.4What Optimality Criteria are Natural? . . . . .	287

12.6.5	Proof of Theorem 2 .....	288
12.7	Discussion .....	288
12.8	Extending the Optimality Result to a Broader Context .....	289
12.8.1	Formulation of a More General Problem .....	289
12.8.2	Case Study: Optimal Selection of Penalty (Barrier) Functions .....	290
12.8.3	Proof of Proposition 1 .....	291
12.8.4	Other Examples .....	291
	References .....	293
	<b>Index</b> .....	297
